Game 1 Sat 10 am		-			LUUNIR
Game 2 Sat roon		vs. Garrett			LEAGUE
Game 3 Sat 1001		vs. Garrett			- F S
Game 4 Sat 2 pin Game 4 Sat 4:30 pm		vs. Rochester			سريتجم مي المجم
Game 5 Sat 4:30 pm		vs. #3 seed			the second
3ame 5 Sat 6:30 pm	Game 4 winner	vs. #1 seed			
* Home team decided	by coin toss for game 1-	3, then by best seed fo	or games 4 & 5		
* Round Robin results	will then feed to bracket	t below. 3 game minim	ium guarantee		
			e limit. No time limit on Games	4 & 5.	
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above eam in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of $\frac{1}{2}$ , 18 = 0.3889 runs-allowed ratio. e runs scored vs. defensive runs a bool play gms & has batted 18 inr	a) Runs-scored ratio (see definitions) -innings played on defense by that team in th The lower runs-allowed ratio is the better see allowed. ie.) the total # of runs scored in all p ngs on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above eam in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of $\frac{1}{2}$ , 18 = 0.3889 runs-allowed ratio. e runs scored vs. defensive runs a bool play gms & has batted 18 inr	-innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p ngs on offense. So, 7 divided by 18 = 0.3889	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above eam in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of $\frac{1}{2}$ , $\gamma 18 = 0.3889$ runs-allowed ratio. e runs scored vs. defensive runs a pool play gms & has batted 18 inr 8 (if needed) to determine winner.	-innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p ags on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above team in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of $\frac{1}{2}$ , $\gamma 18 = 0.3889$ runs-allowed ratio. e runs scored vs. defensive runs a pool play gms & has batted 18 inr 8 (if needed) to determine winner.	-innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p ags on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above eam in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of $\frac{1}{2}$ , $\gamma 18 = 0.3889$ runs-allowed ratio. e runs scored vs. defensive runs a pool play gms & has batted 18 inr 8 (if needed) to determine winner.	innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p gs on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as above team in those games. Ex.) Team	where of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p -to-head, use tiebreaker #2, then #3	lay games, divided by the # of ½, y 18 = 0.3889 runs-allowed ratio. e runs scored vs. defensive runs a bool play gms & has batted 18 inr g (if needed) to determine winner. #1 seed Sat 6:30 pm	innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p gs on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
Runs-allowed ratio - the total nu games & has played 18 innings o Runs-scored ratio - same as abov eam in those games. Ex.) Team	mber of runs given up in all pool p on defense. Therefore, 7 divided by ve except it's a measure of offensiv A has scored 7 total runs in all its p	lay games, divided by the # of ½, y 18 = 0.3889 runs-allowed ratio. e runs scored vs. defensive runs a pool play gms & has batted 18 inr g (if needed) to determine winner. #1 seed	innings played on defense by that team in th The lower runs-allowed ratio is the better se allowed. ie.) the total # of runs scored in all p gs on offense. So, 7 divided by 18 = 0.3889 Once winner is in place, then use head-to-h	ool play gms, divided by the # of runs-scored ratio. The higher runs	<sup>1</sup> / <sub>2</sub> -innings played on offense by that s-scored ratio is the better seed. <i>Note</i>
